Pinori filati

Our labels on demand

Our labels can be requested as promotion of our sustainability and made in Italy project

Three items that guarantee the sustainable nature of the product and the truth of a 0 km supply chain

Richiedi le nostre etichette

Le nostre etichette si possono richiedere come promozione del nostro progetto di sostenibilità e di made in Italy

Tre temi che garantiscono la natura sostenibile del prodotto e la veridicità di una filiera a km 0

Our way to sustainability *Sostenibili come noi*

Made in Italy

We produce at Km 0 inside the textile district a safety and controlled Made in Italy

Produciamo a Km 0 nel distretto tessile un un Made in Italy sicuro e controllato

GREEN WOOL TOPS

The tops we purchase are produced using wools from farms, which apply sheep welfare, perform no mulesing practices and the whole process considers the animals' well-being and the environment.

I velli che acquistiamo provengono da fattorie che agiscono secondo criteri di promozione del benessere animale, non viene praticato il mulesing e il processo viene svolto secondo criteri di tutela dell'animale e dell'ambiente.

Un_{dyed}

Natural blended alpaca is the new challenge: the ecological commitment to present not dyed yarns done without chemical stuff. We use only the natural hair color of the animal.

L'alpaca naturale non tinta e' la nuova sfida: l'impegno ecologico di presentare fili non colorati ne trattati con agenti chimici. Impieghiamo solo il colore naturale dell'animale

Livaeco has a unique tracer in it which needs to be verified/certified at Birla Cellulose – As guarantee of Livaeco in it

Livaeco consente un unico sistema di tracciabilità che deve essere verificato / certificato presso Birla Cellulose - A garanzia della veridicità di Livaeco

We are 4 sustainability members and we adhere the ZDHC protocol. We provide to eliminate toxic and harmful chemicals during the process.

Siamo membri di 4Sustainability e aderiamo al protocollo ZDHC. Operiamo per l'eliminazione delle sostanze chimiche tossiche e nocive durante il processo

Certified by ICEA
[RCS 2015-001]

For more than 10 years we have been producing according to the circular economy. We privilege recycled and sustainable materials to be mixed together to create new and unexpected combinations.

Da più di 10 anni produciamo secondo criteri di economia circolare. Privilegiamo materiali riciclati e sostenibili per mischiarli insieme per creare nuove ed inaspettate combinazioni

Higg Index is a system for measuring the environmental and sustainability practices that the company puts in place.

It is a system that allows companies to commit at a continuous improvement of social, ethical and environmental activities

Higg Index e' un sistema di misurazione delle pratiche ambientali e di sostenibilità che l'azienda mette in atto.

È un sistema che permette alle aziende di cimentarsi nel miglioramento continuo delle attività sociali, etiche e ambientali.

DENIM
RECYCLED COTTON
recycling → reducing → reusing

Our labels on demand
Le nostre etichette su richiesta

Recycling: quality Denim is a product obtained recycling the used denim cuts.

The vintage denim is cut removing zips and buttons only, then the pieces are reduced in fibres and put in production cycle again by spinning, and finally transformed into knit.

Reducing: This product is totally ecologic with no impact on the environment: the denim is not wasted but used again in a new production cycle, the fibres are not dyed as they keep their original colour (just consider that we need 100 lt of water and 9 kw of electricity to dye 1 kg of cotton), so no new chemical colours are used.

Reusing: reusing the things that men have produced is very important nowadays for a clean and sustainable environment. This can be obtained also in fashion where the trend is not only the research of new, but also the reinterpretation of the existing.

RECY
RECYCLED YARN
recycling → reducing → reusing

Recycling: RECY is a yarn born from both recycled polyester (rPET), obtained from the common plastic bottles from garbage recycling, and recycled cotton from industrial wastage. The fibers obtained from respective recycling processes, are then blended during spinning in order to achieve a modern, trendy and extremely performant yarn even for knitwear.

Reducing: the plastic bottles coming out from garbage recycling, are put in reducing, grinding and fusion process to obtain a new fiber which, blended with recycled cotton, originates a new yarn. This is how we create Recy from wastage fibers thanks to a modern technology and tuned with environmental sustainability.

Reusing: reusing wasted materials is a strong social and environmental commitment, which we feel to support nowadays in defense of our planet. This reusing process in the apparel industry gives enormous advantages to the environment, allowing not to waste renewable resources like petroleum, reducing quantity of plastic to be disposed off and reusing wastes, which otherwise would be destined to disposal.

Un-Dyed è una nuova linea pensata all'insegna della sostenibilità e fabbricata in Italia, ottenuta da velli di Alpaca (Vicugna Pacos) naturali i quali non attraversano nessun processo di tintura.

Le fibre provengono da allevamenti controllati secondo i criteri di animal welfare. Nei colori è possibile trovare differenze di intensità di colore dovute alla naturale nuance dei peli di Alpaca, e la presenza di alcune fibre più scure o più chiare.

Un-Dyed is a new line designed in the name of sustainability and obtained from natural Alpaca (Vicugna Pacos) fleeces which are not subject to any dyeing process.

The fibers come from controlled farms complying to the criteria of animal welfare. It's possible to find differences in color intensity due to the natural nuances of the Alpaca hair, and the presence of some darker or lighter fibers.
